

Trends in Drug-Related Hospital Separations, 1999-2018

Northern Territory

- There were [707 hospital separations](#) with a drug-related principal diagnosis in the Northern Territory in 2017-18.
- This is equivalent to 275 hospitalisations per 100,000 people, as compared to 90 hospitalisations per 100,000 people in 1999-00 ([Figure 1](#)).
- The rate of hospitalisations was higher among males than females in 2017-18 (294 versus 256 hospitalisations per 100,000 people, respectively).
- In 2017-18, the rate of hospitalisations was highest among the [20-29 year old age group](#), followed by the 10-19 age group (560 and 487 hospitalisations per 100,000 people, respectively).
- The rate of hospitalisations was highest where there was a principal diagnosis indicating cannabinoids (78 hospitalisations per 100,000 people; [Figure 2](#)).

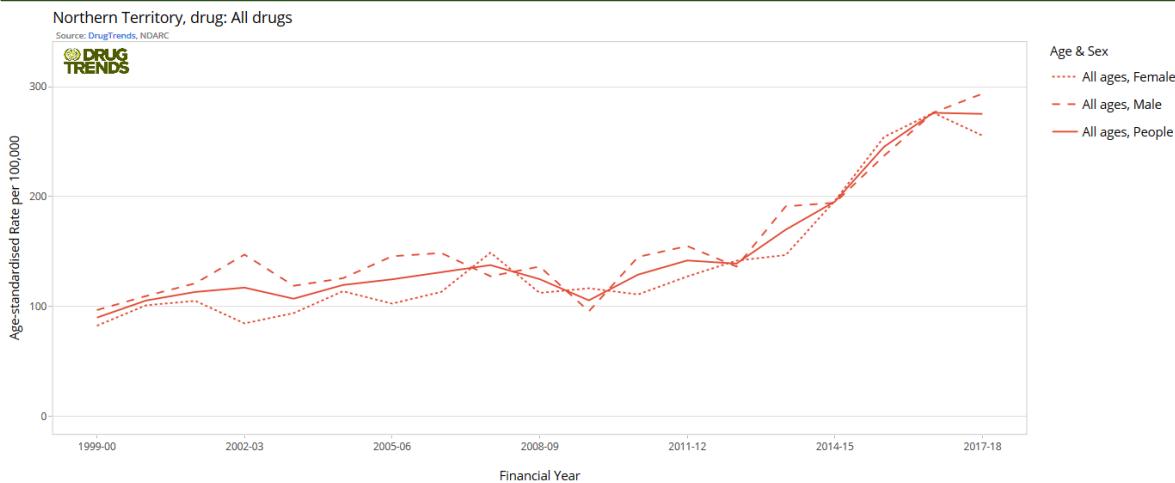

Figure 1. Age-standardised rate (per 100,000 people) of drug-related hospital separations, by sex, Northern Territory, 1999-00 – 2017-18.

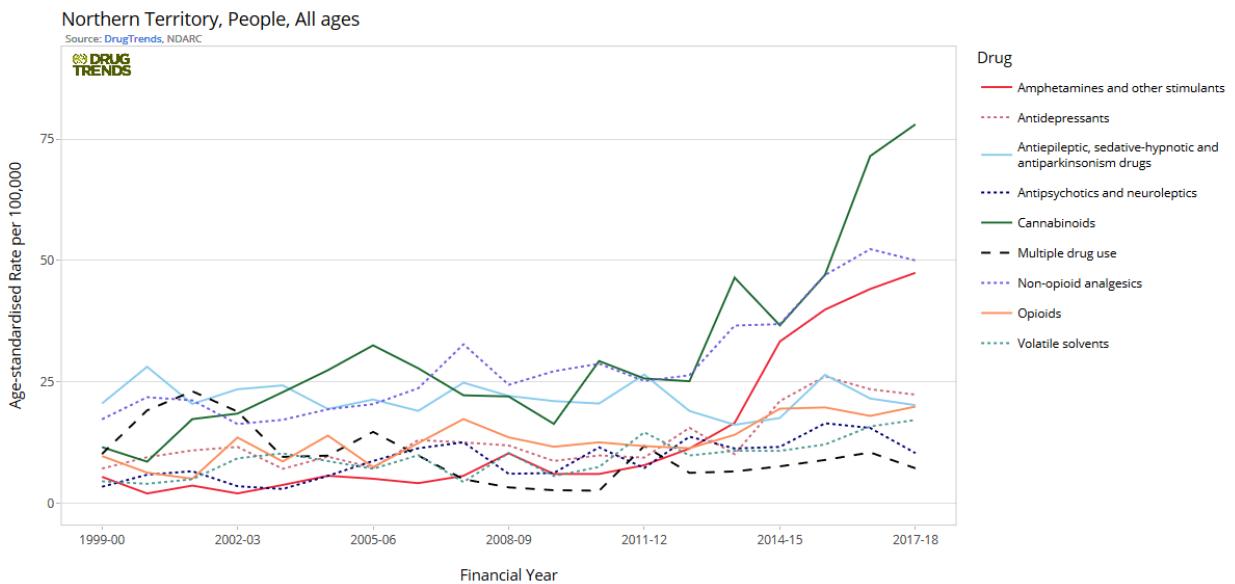

Figure 2. Age-standardised rate (per 100,000 people) of drug-related hospital separations, by drug identified in the principal diagnosis, Northern Territory, 1999-00 – 2017-18.
Numbers for cocaine and hallucinogens are small and thus rates are suppressed to protect confidentiality.

Funding

The Drug Trends program is funded by the Australian Government Department of Health under the Drug and Alcohol Program.

Acknowledgements

We would like to acknowledge the Australian Institute of Health and Welfare for data from the National Hospital Morbidity Database.
